Mr. Adrian A. Adascalitei
Universitatea Gheorghe Asachi
Iasi,
Romania

Subject: EMC Course

Dear Mr. Adascalitei;

Following your request I looked over your new EMC course. I do not want to sound bombastic, but you delivered a most impressive and of unusual proportions work.

I admire the logical organization of the material, the pedagogical approach, as well as the use of very modern tools. You succeeded to rejuvenate the EM Fields course, the oldest, the most dreaded by my students, but the most beautiful and basic one. The animations are effective, they convey at a glance the meanings of the theory, they will help the students to remember and correlate the essentials, they will motivate young and old. My busy schedule did not allow me to ketch up with solved problems, but I hope you did a good job on selecting classical examples and dissecting them in front of the student.

I want to thank you for this great contribution. Students and professors will benefit enormously from it. I believe this work will bring honor to your university.

Warmest congratulations,

Alexander E. Emanuel, D.Sc, P.E., Fellow IEEE

Professor of Electrical and Computer Engineering
