Technical University of Iasi
Romania

Object: EMC on-line course

Dear Adrian,

I navigated in your EMC course pages and of course I had difficulties with the language. In any case the sense, the structure and the contents of the course is clear enough to formulate a judgment. In my opinion the course is well organised and useful to give more than general information about EMC. In fact many specific themes are treated in detail. I appreciate in particular the technical guide lines, but the whole course, theory and practice, is well structured and I think it will be very useful for a good students preparation. In addition some teaching solutions and presentations are very interesting and effective.

If possible I think that should be a good idea to reproduce all the course on CD-ROM and distribute it to the students in order to improve accessibility and out-of-school use. Well done

Sincerely yours,

Ivan
